Bella Protocol Partners With 4EVERLAND to Accelerate Web 3.0 Adoption

Bella Protocol · 3 days ago · 2 min read

Bella Protocol is excited to announce our ecological partnership with 4EVERLAND, a Web 3.0 cloud computing platform enabling global acceleration, privacy protection, distributed storage, and other technical features to accelerate the move towards Web 3.0.

4EVERLAND will provide DWeb Hosting services to Bella ecosystem applications, further improving data uploading, downloading, visit and other cloud computing services. 4EVER-HOSTING is an application for developers that can be accessed from the official website of 4EVERLAND. Developers can deploy DWeb to the 4EVERLAND gateway through the visual interface (Hosting App) or the command line ([@4everland/cli](#)). All nodes in 4EVERLAND can provide persistent storage for the DWeb, and all gateways can provide acceleration for the DWeb.

Bella Protocol's website, <https://dweb.bella.fi>, has been fully decentralized using 4EVERLAND's DWeb hosting services. Decentralization of <https://dweb.bella.fi> will facilitate better security, transparency, and traceability, whilst further improving data processing.

Bella Protocol believes everyone deserves equal access to premium financial products and services with elegant design and a smooth user experience. Partnering with 4EVERLAND, utilizing its distributed, highly efficient data hosting gateway, together with Bella's suite of open finance products, we are building the Web 3.0 infrastructure of tomorrow. True DeFi is interoperable, and Web3.0 should be decentralized. Bella will work with 4EVERLAND to promote ecological applications to achieve DWEB decentralized hosting and full access to the Web3.0 world.

About 4EVERLAND

4EVERLAND is a Web 3.0 cloud computing platform with global acceleration, privacy protection, distributed storage and other technical features. Based on IPFS and the underlying technology of Ethereum, 4EVERLAND is committed to providing a distributed, highly efficient, self-motivated, and low-cost data hosting gateway, and becoming the infrastructure for millions of Web3.0 developers and applications ([white paper](#)).

About Bella

Bella is a suite of open finance products, including automated yield farming tools, BEL Locker, and Flex Savings. We believe everyone deserves equal access to premium financial products and services with elegant design and a smooth user experience.

Bella Protocol is backed by Binance Labs and Arrington Capital as lead investors. Other investors include Alhabit, AlphaCoin Fund, Koi Ventures, Ledger Capital, Tensor, N7 labs, Quest Capital, HBTC Labs, and more.

Bella brings your familiar mobile banking into crypto with just one click. With Bella, you can just simply sit back, watch your asset grow, and leave all the heavy-lifting to secure, automated smart contracts.

Bella's core team consists of serial entrepreneurs and blockchain veterans who have tremendous experience and a proven track record in finance, cryptography,

blockchain, and engineering.

For more information about Bella, or to join our team, please contact us at contact@bella.fi
